

Call System - Admin Guide

Twin Home Buyer · phone routing, the AI assistant, the answering service and Call Coach

Everything the team sees, plus where it is configured. Two systems are involved and it helps to keep them apart: **the phone routing**, which decides whose phone rings and in what order, and **Call Coach**, which records, transcribes and grades whatever happens on the call.

The whole path of an inbound call

Seller dials a campaign number

One of ~52 tracking numbers, each with its own callflow

Lead source is recorded

Two webhooks fire before anything rings - this is what puts REDDIT or PPC on the card

The team line rings

5 to 10 seconds, set per campaign

If nobody answers: the AI assistant

It asks what time it is, then decides

In hours: the AI runs the intake

Posts the LIVE SELLER CALL card, anyone can claim with ME

Out of hours: straight to the answering service

One line, then a live person - no intake

Nothing answered at all

Missed-call alert fires

The ring time is short on purpose, but check it

Reddit currently rings the team for 5 seconds, PPC for 10. Five seconds is barely one ring, so in practice the team rarely gets a chance on that campaign. If you want people to have a real shot at answering, raise it - the cost is the seller waiting longer before the AI speaks.

The answering service, and the 8-5 rule

The answering service answers everything outside the shift. This is decided by us, not by them - their own portal cannot stop their agents picking up, so the call simply never reaches them during the day.

When	Who takes the call
Monday to Saturday, 8:00 AM - 4:59 PM	The team, then the AI assistant
Monday to Saturday, 5:00 PM - 7:59 AM	The answering service
All day Sunday	The answering service

How it decides

- The AI has no clock of its own. When a call arrives it asks our own server what time it is in California
- The server answers with the hour, the day, and a plain yes or no for whether the office is open
- **Open** - the normal assistant answers and runs the intake
- **Closed** - a second, much smaller assistant answers instead. It says one line, "One moment, connecting you", and passes the caller straight to the answering service
- A card is posted to Chat at the same moment so the team can see it happened

Why there are two assistants

The main one has a long script and, after a fixed greeting, waits for the caller to speak before it does anything. Out of hours that pause is wasted - so a separate assistant with a three-line script speaks first and transfers immediately. Trying to do it with a rule inside the main script was tested and it sat silent for fifteen seconds instead.

Changing the hours

The shift is set in the server's settings, not in the code, so it can be changed without a developer:

Setting	Meaning	Default
OFFICE_OPENS_HOUR	Shift starts, on a 24-hour clock	8

Setting	Meaning	Default
OFFICE_CLOSSES_HOUR	Shift ends	17 (5 PM)
OFFICE_CLOSED_DAYS	Days the team never works	Sunday
AFTER_HOURS_AGENT_ID	Which assistant answers out of hours	must be set

The server prints what it read at startup, including whether each value came from a setting or a default. If a change does not seem to have taken, that line says so plainly rather than leaving you to guess.

The ME claim, step by step

The AI answers a seller

Call starts

Card posted to Google Chat

LIVE SELLER CALL, with the lead source and the caller's number

A rep replies ME in the thread

2-minute window

First valid reply wins

Later replies are ignored - one seller is never sent to two people

The AI is told, mid-call

It finishes its sentence, then offers the seller the handover

Seller says yes

Call transfers to that rep's phone

LIVE CALL CLAIMED card posted

Shows who took it and what was collected

What can stop a claim landing

Symptom	Cause	Fix
Rep types ME, nothing happens	They are not on the claim roster, so the system does not recognise them	Add their Google Chat user id to the roster setting
Recognised, but the transfer fails	On the roster but no phone number against their name	Add their mobile to the roster entry
Claim arrives after the call ended	More than 2 minutes passed	Nothing to fix. The callback card covers it

Symptom	Cause	Fix
Spanish call cannot be claimed	The Spanish leg is a separate call. The claim has to follow it	Reply ME in the thread under the Spanish notice, not the original card

Call Coach: the control sheet

Call Coach is run entirely from one Google Sheet. No code, no restarts - it reads the sheet on every call.

The Numbers tab

One row per campaign number. Three columns matter:

Column	What to put in it
Number	The campaign's tracking number, the one sellers dial
Ring Group	Who should answer. Several mobiles separated by commas, or one group number
No Answer	Where the call goes if nobody picks up - usually the AI line. Leave blank for no AI

The mistake worth avoiding

Putting one person's mobile in Ring Group. Then only that phone rings, and every time they are busy the seller gets the AI instead of a human. List everyone who should take that campaign.

The Reps tab

One row per person:

Column	What it does
Rep ID	Short lowercase name, like era
Name	How it shows on the dashboard
Mobile	Their phone, so inbound calls attach to them
REI User	Their REI BlackBook id, so outbound calls attach

Without REI User, that rep's outbound calls show a dash instead of their name.

Every week

- 1 **Executive page** - check calls, average score and appointments
- 2 **Reps page** - look for anyone at zero calls. That is almost always a missing Mobile or REI User, not a lazy rep
- 3 **Hang-ups under 30 seconds** - if this is high, the openings need work, not the closing
- 4 **Inbound vs outbound score per rep** - people are often strong at one and weak at the other

The buttons

Button	Where	When to use it
Fix rep names	Calls page	After adding a Mobile or REI User. Attaches past calls to the right person
Score unscored	Reps page	Grades any call that was missed
Repair the Sheet	Reps page	Fixes missing columns after an update

When something looks wrong

What you see	What it means	What to do
Sellers keep getting the AI	Ring Group has one person in it, or the ring time is very short	Add more numbers to that row, or raise the ring seconds
A rep shows 0 calls	Their Mobile or REI User is missing	Fill it in on the Reps tab, then click Fix rep names
Rep column shows a dash	Nobody said their name, and their REI id is not mapped	Add the REI User id, or remind the rep to introduce themselves
Score shows too short	Under 45s inbound or 2 min outbound	Nothing. Working as intended
A call is missing	Made outside REI, or REI is still processing it	Wait 10 minutes. If still missing, it was not made through REI
Dashboard shows 502	The server is not running	Start the Call Coach task on the office PC
Red quota banner	Google is rate-limiting reads during a busy spell	Clears by itself in a minute
Caller reaches the AI in English but is Spanish	The assistant needs two unusable answers in a row before it hands over	Normal. It fires on the second one
No card when the office is closed	The after-hours assistant is not set	Check AFTER_HOURS_AGENT_ID is filled in

Known issues, still open

Recorded here so nobody spends an afternoon rediscovering them.

Issue	Where it stands
CALL ANSWERED BY A TEAM MEMBER can be wrong	The phone system calls a call "answered" the moment anything picks up - including voicemail and the recording system. So the card can fire when the AI actually took the call. Removed from the Reddit number, which stopped the false cards but also stopped the true ones. Still present on every other number.

Issue	Where it stands
That card carries no call reference	It is posted on a delay, so it lands in the middle of whatever call is happening at that moment and looks like it belongs to it. Adding the reference and the call time would fix the confusion on its own.
The routing automation runs several times per call	Seen firing seven times in three minutes. Harmless so far, but it is the likely source of any duplicate cards.
50 numbers still need the corrected callflow	Only the Reddit number has the current shape. The rest still have the old answered-webhook arrangement.

Who to ask

Anything not on these pages - send a screenshot to **Jonathan** or **Seth**. For anything touching the phone routing, the AI assistant or the answering service, say which campaign number the call came in on. Each number has its own callflow and they are not all identical.
